

PHYSICAL ARGUMENTS AGAINST THE "NUTS & BOLTS" VIEW OF UFO'S

1. Variety of the craft-----way too many.
2. Extreme acceleration & deceleration----too many G forces
3. Near right angle turns at high speeds—the momentum/seat belt argument.
4. Absence of sonic booms
5. Absence of air friction effects
6. Appearance/disappearance of craft
7. Luminous tails & lingering wisps sometimes
8. Decrease in temperature around craft—cold
9. Pungent odors
10. Burnt earth sometimes
11. Electrical interference
12. Splitting up & rejoining of craft
13. Changing shape in flight
14. Flying into & out of the ground
15. Being detected on film & not by sight
16. Being detected by sight & not on film
17. Being detected on radar sometimes, sometimes not & sometimes on every other pulse.
18. How UFO's have progressed to be just a little ahead of the culture that is observing them.
19. Their strange religious "message".
20. Their cat-and-mouse method of revealing themselves makes no sense at all.
21. Their strange abduction cases and their pre-occupation with sex.
22. Their outright lies about factual things.
23. The number of planets & stars that they say they are from-----way too many at distances too far separated.
