

# Interdimensional Theory:Hyper-Space

The parallels between this theory and UFO manifestations are numerous, but several important ones stand out:

1. The sudden appearance & disappearance of UFO's, sometimes in as much as 1/30th of a second.
2. The changes in form of UFO's, especially while in motion.
3. The fact that the UFO appearance occurs as a totally real, measurable, event in our space. For an object which is elaborate in shape (like the human being in figure 5), its appearance in our space would totally boggle our minds.
4. UFO's entering the ground and re-appearing out of the ground elsewhere can be explained.
5. Another interesting feature of the interdimensional theory is that while we perceive each others outward boundaries ( I see your skin), the interdimensional being can see our insides as well (see figure 6b).

To the beings in this hyper-space, their reality is richer and more substantial than we can perceive or imagine. Might this hyper-space be a spiritual or psychic dimension?

“What American ufology wants to talk about is the message that UFO's are here, they are extraterrestrial, they are alien, interplanetary visitors that use nuts & bolts spacecraft....they laugh down any suggestion that there might have been UFO's in folklore in past times. The suggestion that there might be psychic phenomena, that there might be phenomena that went beyond the normal extraterrestrial interpretation was something that just couldn't be accepted. I'm sorry, but we have to be guided by the data”.....Dr. Jacques Vallee

Dr. Vallee, mystified by this tendency, calls it 'specifically America' and says that almost all UFOlogy around the globe has embraced the interdimensional theory.

Thanks to the work of Dr. Vallee, Dr. J. Allen Hynek, John Keel and others, the interdimensional theory has gotten more popular in America. The rise of the New Age movement in America in the 1980's has also helped it grow.
